

intimus DIS 600/1000

FOR THE HIGHEST SAFETY REQUIREMENTS

RELIABLE DESTRUCTION OF YOUR DATA

The security requirements for destruction of sensitive data are increasing worldwide. The higher the security requirements, the smaller the data media which must be destroyed.

Disintegrators are therefore used where standard shredding technology reaches its limits. They can be used to shred a wide variety of materials into tiny particles or granules.

The technology of the disintegrators meets even the highest security requirements of industrial users, government agencies and banknote printers, while at the same time ensuring high throughput. Quick-change screens offer the best possible flexibility. This makes it possible to security level from P-3 to P-7 can be adjusted immediately.

Our long-term partners include central banks, security printers, intelligence agencies, the military and other government agencies from around the world, as well as industrial and waste management customers.

The **intimus DIS 600/1000** is perfectly suited for the reliable and economical shredding of paper and plastics such as:

- **Paper documents and valuable printed matter** such as documents, banknotes, passports or ID cards
- **Magnetic data carriers** such as smart cards or floppy disks
- **Optical data carriers** such as CDs or DVDs

DISINTEGRATORS - A PROVEN TECHNOLOGY

Disintegrators have a rotor made from solid material with screwed-on and easily regrindable blades made from high-quality tool steel. The material is fed into the shredding chamber from above through a hopper and cut there, as in a pair of scissors, between the very fast rotating rotor blades (sitting on the rotor) and the fixed stator blades (mounted in the housing). As the blades cut the material into undefined shapes and sizes, a screen is required underneath the rotor. This screen ensures that only particles of a certain size leave the machine.

The particles remain in the cutting chamber until they are small enough to fit through the holes in the screen. By fitting a screen with a larger or smaller hole diameter, the cutting size produced can be changed in a matter of minutes and the security level adjusted from P-3 up to P-7. A dust extractor is required to convey the particles through the screen into a collection bag, press container or briquetting press. Disintegrators from intimus are characterised by low vibration at high revolutions, uniform load and low energy consumption.

Knife made of high quality, hardened tool steel

Technical Design

USPs

- The cutting sizes and the achievable security levels of a disintegrator depend on the perforation of the screen used. With our intimus disintegrators, you can perform a screen change within a few minutes and adapt the machine specifically to your safety requirements.
- Screens are available for security levels P-3 to P-7 according to DIN 66399. Even the strictest NSA standards of the US government are met.
- For maximum throughput and best durability, the screens are made of thick, drilled (not punched) steel plate with optimised hole spacing and geometries.
- Thanks to the generous working width, all common paper and EDP formats can be easily fed, depending on the model.
- A clear panel with safety concept and protection device facilitates operation.
- The rotors are made of solid steel on high-precision CNC machining centers. They are perfectly balanced, run almost vibration-free even at high speeds and are characterized by low energy consumption.
- The durable knives are made of high quality hardened tool steel. Worn or damaged knives can be easily replaced or resharpened many times by any specialist dealer.
- The upper part of the housing can be folded back in just a few steps. The wide-opening chassis allows best accessibility to the screen as well as to all rotor and stator knives for convenient and quick replacement.
- Suitable soundproof booths, dust extractors or briquetting presses are available for all disintegrators.
- For larger models from intimus DIS 300/450 upwards there are optional feeder belts, pre-shredders and magnetic and magnetic separators.

intimus Disintegrators

PRODUCT INFORMATION

intimus has a wide range of models for different performance requirements and applications. This includes 6 disintegrators, from the intimus DIS 150/230 for shredding paper and CDs in the office to the intimus DIS 600/1000 for centralized

shredding in large administrative buildings, military facilities or manufacturing plants. In this way, applications from security level P-3 to P-7 according to DIN 66399 and according to NSA-CSS 02-02 with throughput rates from 40 to 2 000 kg/h can be covered.
